Objective

Computer Science student specializing in Data Science with a strong grasp of DSA. Experienced in Machine Learning and MERN stack development, currently focusing on building AI-driven surveillance and automation solutions.

Education

Bangalore Institute of Technology

B.E. in Computer Science (Data Science) | CGPA: 8.9

Bangalore, India

Oct 2023 – Present

- Coursework: Data Structures & Algorithms, DBMS, SQL, OOPs, Python, C, Java.

Jawahar Navodaya Vidyalaya

PCMC (Class XII) | Percentage: 87%

Bangalore, India

Aug 2016 – Mar 2023

Professional Experience

Tattvira

Software Engineering Intern

Bangalore, India

Apr 2026 – Present

- Building an AI surveillance platform on custom Ubuntu Core Linux to handle real-time CCTV feeds.
- Optimizing YOLO inference with TensorRT to detect security incidents with minimal latency on edge devices.
- Developing a backend using FastAPI and Redis for alert handling, and Polars for fast analytical processing.
- Designing a desktop dashboard using React and Tauri to create a smooth kiosk interface for monitoring.
- Managing deployments with Snapcraft to ensure secure, containerized OTA updates for distributed hardware.

Technical Skills

Languages: Python, C, C++, Java, JavaScript, SQL, HTML, CSS

Frameworks/Libraries: NumPy, Pandas, FastAPI, React.js, Node.js, Polars, MediaMTX

Databases: MySQL, MongoDB, SQLite, Redis

Developer Tools: Git, GitHub, VS Code, Linux (Ubuntu Core), Snapcraft, Docker, TensorRT

Core Concepts: Data Structures & Algorithms (DSA), DBMS, OOPs, REST APIs, Machine Learning

Projects

FactCheck AI | Python, JavaScript, Google Gemini SDK

2026

- Built a tool using the Google Gemini SDK to identify hallucinations and verify claims in AI-generated text.
- Developed a backend in Python to cross-reference AI responses against reliable external data sources.
- Created a React-based UI that highlights unverified text in real-time, helping users trust AI-driven content.

Wikipedia Sentiment Analysis | Kafka, Spark, Streamlit, PostgreSQL

2026

- Designed a real-time pipeline with Apache Kafka to ingest a global feed of live Wikipedia edit comments.
- Used Spark Streaming to process the text on the fly, applying NLP to detect shifts in public sentiment.
- Built an interactive dashboard in Streamlit to visualize high-activity zones and controversial topics globally.

Autonomous CI/CD Self-Healing Agent | LangChain, OpenAI, Python

2026

- Engineered an agent with LangChain and OpenAI that monitors GitHub CI/CD logs to diagnose build failures.
- Automated the debugging process by generating and suggesting code patches directly to the developer.
- Demoed a working prototype at the PWxRIFT hackathon, successfully fixing real-time deployment bugs.

Achievements and Activities

Competitive Programming: Solved 400+ problems on LeetCode (Handle: BrawlyNara007) with a peak rating of 1551.

Hackathon: Built a self-healing CI/CD agent at PWxRIFT 2026, creating an intelligent error checker during a 24-hour sprint.

Hackathon Finalist: Qualified for final round in ByteQuest Vibecoding Hackathon (Jan 2026) by Ramdeobaba University.
