OBJECTIVE

Enthusiastic Computer Science student specializing in Data Science with a strong foundation in Data Structures and Algorithms. Proficient in C++, Python, and Java, with hands-on working knowledge in Machine Learning and Backend Development (MERN). Passionate about logic building and developing AI-driven solutions.

EDUCATION

Bangalore Institute of Technology

B.E. in Computer Science (Data Science) | CGPA: 8.9

Bangalore, India

Oct 2023 – Present

- Coursework: Data Structures & Algorithms, CN, OS, DBMS, OOPs, Machine Learning, Python, C, Java

Jawahar Navodaya Vidyalaya, B(U)

PCMC (Class XII) | 87%

Bangalore, India

Aug 2016 – Mar 2023

PROFESSIONAL EXPERIENCE

Tattvira - Intern

Bangalore, India | Apr 2026 – Jul 2026

- Engineering a custom NVR device on Ubuntu Core Linux, configuring system services, snap packages, and OS-level components to support a production-ready embedded surveillance platform.
- Building a real-time CCTV monitoring dashboard in React and Tauri, incrementally delivering features for live feed display, alert visualization, and incident management across various connected cameras.
- Designing a FastAPI + Redis backend for real-time alert ingestion and routing, handling event streams from an AI pipeline detecting crowd density, weapon presence, and traffic anomalies via YOLO.
- Integrating Polars for fast analytical processing of surveillance event logs, replacing pandas for 5x faster query performance on large historical datasets.

TECHNICAL SKILLS

Languages: Python, C, C++, Java, JavaScript, SQL, HTML, CSS

Frameworks / Libraries: PyTorch, NumPy, Pandas, FastAPI, React.js, Node.js, Polars, OpenCV

Databases: MySQL, MongoDB, SQLite, Redis

Developer Tools: Git, GitHub, VS Code, Linux (Ubuntu Core), Snapcraft, Docker

Core Concepts: DSA, CN, DBMS, OOPs, REST APIs, Machine Learning, Computer Vision, LLMs

PROJECTS

Multi-Threaded HTTP Proxy Server | C++17, POSIX Sockets, pthreads, LRU Cache

2026

- Built a multi-threaded HTTP/HTTPS proxy server in C++ using POSIX sockets with a thread pool of 8 workers, handling 50+ concurrent clients and bidirectional CONNECT-based HTTPS tunneling via select().
- Engineered an LRU cache (unordered_map + doubly-linked list) with O(1) get/put, reducing origin server load by approx. 40% and delivering sub-1ms cache-hit response times across concurrent clients.

Packet Inspection and Analyzer | C++17, libpcap, TLS/SNI, pthreads

2026

- Built a multi-threaded DPI engine in C++ with a Reader -> Load Balancer -> Fast Path pipeline using consistent 5-tuple hashing to ensure stateful per-flow tracking across worker threads.
- Implemented TLS SNI extraction from Client Hello packets without decryption, classifying HTTPS flows by application (YouTube, Facebook, etc.) for accurate domain-based and app-based packet blocking.

Auto-Complete System using Trie | C++, ,React, Trie, DFS, Heap

2026

- Built Trie-based autocomplete system in C++ supporting 10k-word dictionary.
- Returning top-5 frequency-ranked completions in O(L+K log K) with optional fuzzy matching.

CERTIFICATIONS:

- Networking Devices and Initial Configuration course by CISCO Networking Academy.
- Getting Started with Artificial Intelligence by IBMSkillsBuild.

ACHIEVEMENTS & ACTIVITIES

- Competitive Programming: Solved 400+ problems on LeetCode (Handle: BrawlyNara007).
- Hackathon: Built a self-healing CI/CD agent at PWxRIFT 2026 in a 24-hour sprint.
- Hackathon Finalist: Final round at ByteQuest Vibecoding Hackathon (Jan 2026), Ramdeobaba University.
- Mentored Junior students in a DSA workshop, delivered problem solving strategies and comprehensive roadmap.
